

FEED LOK

CONTROL SYSTEMS

Right Bin...
Right Feed...

Everytime!

FEEDLOK

CONTROL SYSTEMS

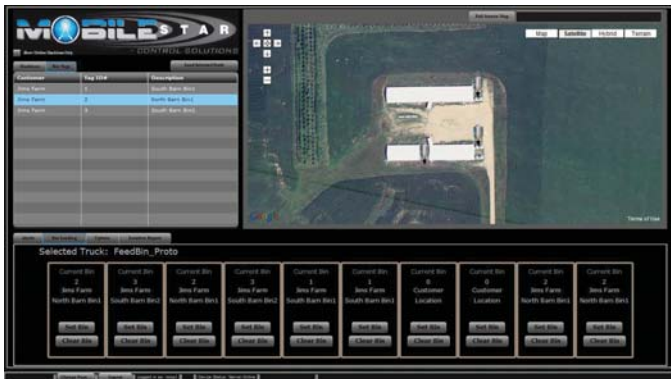

FEEDLOK is a revolutionary concept in distributing feed from the feed mill to the farm.

- *Right Feed...right bin...everytime.* FEEDLOK gives you the security of knowing that the right feed gets delivered to the right bin.
- *No more wrong deliveries.* Code your feed mixture to the RFID tags. The hard coded RFID (Radio Frequency Identification Tag)...will never change...unless you want to change the code.
- *Tag the Bin.* Simply tag the bin to the delivery point with the information you input at the feed mill and FEEDLOK will do the rest. Wrong code...and FEEDLOK will not allow dispensing of the Feed mix. It's as simple as the RFID tag code matching the FEEDLOK code .

Hard Coded RFID Tags
Sequential Events
Clock time...to event
Event Alarms
GPS truck location

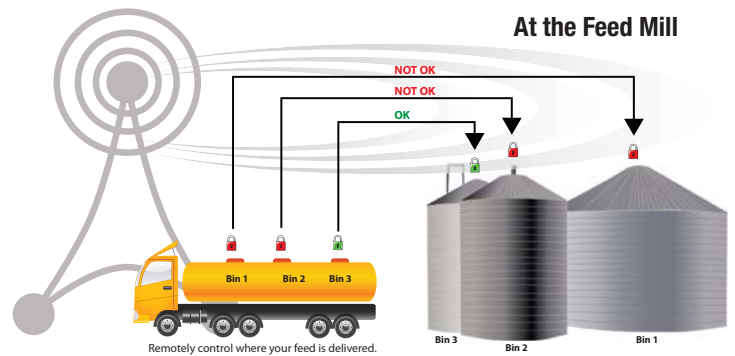

...and there's more!

- *You'll always know where your trucks are!* FEEDLOK has a built in GPS tracking system.
- *Alarms.* If manual override is engaged...FEEDLOK will deliver an alarm.
- *Time the Event.* You will always know exactly when the delivery was made... and to what bin.

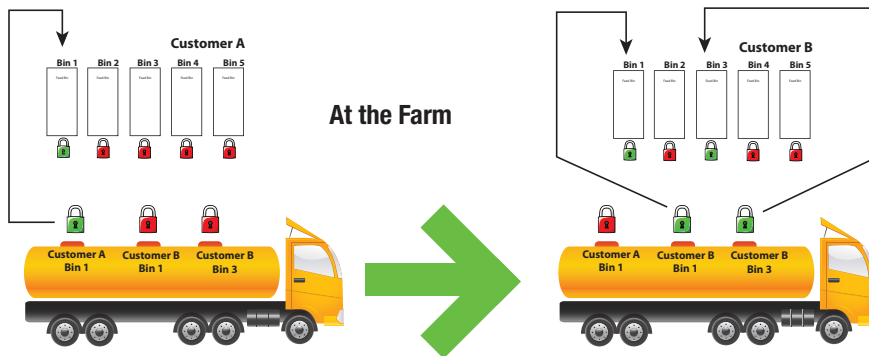

FEEDLOK Dashboard

FEEDLOK delivers all these features right at your desktop! It's easy to use...easy to set up...and FEEDLOK will pay for itself quickly with no more wrong deliveries.

Here's how it works

FEEDLOK enables feed tracking from the origin location to the RFID tag at the farm bin location
